

DENK

2008 - 2009

Dear Customer!

Our gardens are becoming more and more important in our lives. The garden is the gateway to nature, an extension of our living rooms and a source of relaxation and recovery. But what does a successful garden design look like? There are many answers to this question. Our workshop's philosophy gets its inspiration from nature. We want to support your natural garden design using our ceramics and to bring the natural charm of our unique materials into your garden.

Our shapes and models have unique, artistic hand lettering and adhere to bionic and natural principles. It's up to you whether you have a modern or classic garden. Our products fit into your life, depending on the location and surroundings.

Create eye-catching islands in your garden. The natural shapes and colours of our products appeal to something deep within. At night, our lights bathe the garden in warm light and reveal a romantic world – both summer and winter.

Our fire ceramics combine fire and ceramics. They bring warmth, light and fire into the garden. No other element awakens our emotions like a crackling fire.

Animal protection is a major concern for us. Civilisation is forcing more and more animals out of their natural habitat. We hope that our animal protection products

will spur on your enthusiasm for animal protection and at the same time guarantee that our native animals have somewhere to live.

Denk was established in 1964 by Franz Denk and has since become a second-generation family company. When it comes to materials, we only use especially high quality clay from Germany that we fire in clean gas ovens at up to 1,330°C. Our particularly careful and intricate production is the basic requirement for the high quality of our garden ceramics and their 15-year guarantee.

All ceramic products in this catalogue are made in our workshops in Coburg. We are proud of our staff, all of whom are masters of their trade. We aim to offer simple yet high quality products that are good value for money and that will keep their value over centuries.

Fabian & Franz Denk

July 2008

Good to know

With *CeraNatur*[®], *CeraFlam*[®] and *CeraProTherm*[®], three ceramic developments from our workshops have been patent-protected as DENK brands.

CeraNatur[®] stands for unglazed and really natural ceramics. It's pleasantly velvety and, at the same time, repels dirt. *CeraNatur*[®] is frost-proof, weatherproof and colour-fast. We offer a 15-year guarantee on materials. Our "steady shape" garden furniture and our animal protection products are made from *CeraNatur*[®].

CeraFlam[®] stands for our unique DENK fire ceramics. No other ceramic material has such exceptional qualities. Natural fire ceramic whose material composition is the result of space research. *CeraFlam*[®] is resistant to heat and aging in the long term. Our braziers are made from *CeraFlam*[®].

CeraProTherm[®] is a further development of our *CeraFlam*[®] ceramics. A really special ceramic has resulted from adding highly temperature-resistant minerals and special storage clays. *CeraFlam*[®] is extremely resistant to fire and temperature changes. This ceramic is also able to store large quantities of heat. Its large-pore structure also makes the material extremely solid and robust. *CeraProTherm*[®] is a high-quality high-tech material with a hand-made look. Our chimineas are made from *CeraProTherm*[®].

15-year material guarantee offered on all garden lights, garden benches, water towers and all garden ceramics.

Detailed installation instructions or descriptions are included with each product.

All of our products are very sturdy, withstand impact and are shock-proof. Glass is either safety glass or protected by ceramic.

All lights have been tested and are EC certified.

For cleaning we recommend using soft soap or conventional household cleaners. A fine-pore dry sponge is sufficient for matt glazes and surface dirt. Braziers do not need to be cleaned, because they burn themselves clean.

Our glazes are made from coloured clay (engobes) that turn into beautiful, natural, matt and shimmering colours when burned.

Our outside lights and our garden ceramics are well equipped for the outdoor life and will last for decades in the house or garden.

All ceramic products are made in our workshops in Coburg – Handmade in Germany.

The wax burner

The patented garden lantern
for recycling candles

The story of a patented invention

We have been working on developing a wax-powered garden lantern for years. The problem always is that high quality ceramics don't make any sense if the customer can't refill with fuel, i.e. wax, simply and cheaply.

On the other hand, every household gathers wax remains and candle stumps that are normally thrown away.

This is where our invention comes in. All candle remains collected can be easily reused using the wax burner.

You simply have to place them in the wax burner and old candles become new light. The wax burner is environmentally friendly, simple and economical to use.

The wax burner is a long-burning garden lantern whose light can't be blown out even by strong winds. They can be safely used outside and give off a very beautiful, soft light.

The wax burner has a permanent fibre glass wick and comes ready filled with 1kg wax. It can burn for 48 hours.

Candle recycling

It's really exciting for the customer: The DENK wax burner is the perfect device for recycling all candle remains.

The principle is simple.

Old candles, stumps and wax remains are simply placed at the side in the wax burner. The wax is melted by the burner and becomes fuel again.

Wicks do not have to be removed.

They sink to the base of the brazier where they can't catch fire. They don't need to be cleaned up either.

The wax burner is patented for DENK.

CeraProTherm[®] storage ceramic

Unique ceramics are needed to make the DENK chimineas.

CeraProTherm[®] is a further development of our *CeraFlam*[®] ceramics. A really special ceramic has resulted from adding highly temperature-resistant minerals and special storage clays.

CeraProTherm[®] is extremely resistant to fire and temperature changes. This ceramic is also able to store large quantities of heat. Its largepore structure also makes the material extremely solid and robust.

CeraProTherm[®] is a high-quality high-tech material with a hand-made look.

Chiminea

made of *CeraProTherm*[®] storage ceramic

Chimney, tiled stove and cooker – 3 in 1

- Open-fire experience.
- The heat retention capacity of a tiled stove brings warmth and comfort to your patio, balcony or garden.
- By adding a grill pan, the DENK chiminea becomes a purpose-built cooker.

Benefits of the DENK chiminea

- The oven has a one-part body made from durable, heat-resistant *CeraProTherm*[®] ceramic.
- The oven has a very high heat retention capacity and radiates gentle warmth for hours.
- Narrow, compact construction, fits on every patio but can also be used on balconies.
- The DENK chiminea can easily be transported by two people and can be placed anywhere.
- It can be used with any wood.
- Thanks to the built-in smoke convector and the high smoke chimney, there is a very even, clean burn-off with no unpleasant smoke.
- Built-in ceramic smoke extractor, like on a tiled stove, for optimum use of the energy burned.
- The ceramics are frost-proof and the chiminea can be used outside all year round.
- It's easy to use because there are no unnecessary technological gimmicks.

CeraProTherm[®] is a brand of Denk Keramische Werkstätten KG and is protected by patent law.

DENK

Handmade in Germany

As efficient as a tiled stove

Ceramic smoke extractors have been built into our chimineas, just like in tiled stoves. Pressure builds up in the combustion area and the hot smoke can release its energy optimally onto the *CeraProTherm*[®] storage ceramic. This construction allows the highest possible heat production. The high smoke chimney ensures an even, clean burn-off and prevents unpleasant smoke. The height of the smoke chimney can be adjusted if necessary.

Braziers

Our braziers are made from *CeraFlam*[®], the patent-protected DENK fire ceramic. No other ceramic material has such exceptional qualities. Natural fire ceramic whose material composition is the result of space research. *CeraFlam*[®] is durably heat resistant, stores heat for a long time and does not age. *CeraFlam*[®] is only available from DENK. While the term brazier is used globally, the recipe for the ceramic compound is still our well kept secret today.

DENK braziers can and must be fuelled everywhere outside, both summer and winter. All DENK braziers are transportable. Using a DENK brazier you can create wonderful light, a homely atmosphere and comforting

warmth in no time. You can also use any DENK brazier for grilling and roasting. We offer a matching steel pan with insulated handles and steel grill at a reasonable price, with every brazier.

DENK *CeraFlam*[®] braziers keep their shape and service life after years of intensive use. The material will not wear. You can keep producing fire until heart's content. There isn't much to think about. The instructions for use supplied are very easy to follow and guarantee the warranty.

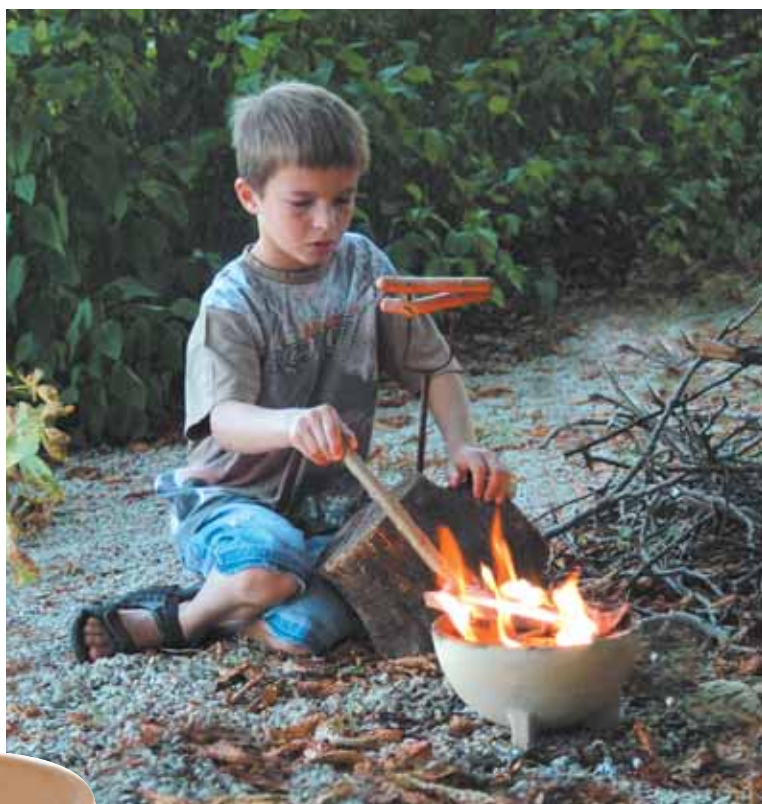

DENK braziers are used with wood. Wood coal can also be used for grilling.

Nesting holes for wrens and tits

Although the wren is the second smallest bird in Europe, its voice would put even Caruso in the shade. The powerful song of the male starts early in the morning and only quiets down late in the evening. To keep their energy levels high, wrens eat plenty of insects. Wrens build their nests close to the ground in hedges and bushes. The DENK nesting holes can simply be hung on the rope supplied, without damaging trees or bushes. The roof and the rope are attached to the body. This makes the nesting hole safe from predators. To clean, pull the roof upwards and then simply wash out the nesting hole. Wrens will also use this hole as somewhere to shelter during the winter. It's also suitable for tits, depending on the hanging height.

Ø 18 cm, H 14 cm, 2 kg, 1 m rope, instructions
ZKH

Titmice nesting house

We love titmice, because they spend all year with us and they stay in the same place, as long as we provide them with safe places to nest and feed them during the winter. During the rest of the year they eat insects in our gardens and delight us with their chirruping and trustfulness. The secure, heavy roof of our nesting house can be removed for cleaning. Our titmice nesting houses have been designed for all larger titmouse varieties. A small branch can be stuck into the front to make a perch. The tits also use the nesting house for shelter during the winter.

Hole Ø 3 cm, H 22 cm, D 20,5 cm, 2,5 kg, instructions
NH3-HE

Bat cave

Nocturnal bats successfully hunt for insects even in the pitch dark. Sadly of the 25 types of bat native to Central Europe 17 are already on the Red List of endangered species. Bats are finding fewer and fewer shelters and nesting places in our houses and gardens, because the tightly closed roofs and wooden cladding on most houses drive the useful bats out of our gardens. The DENK cave is a natural sleeping and nesting place for bats. Bats can safely sleep and nest in our nest holes without being troubled by predators. The DENK bat nesting boxes can either be screwed on or hung from the back using a hook.

L 44 cm, W 26 cm, D 5,5 cm, 7 kg, instructions
FMH

Feeding roof

The DENK feeding roof is used as a holder for bird feed dumplings. It looks attractive when hung by its high quality brass chain on branches or in bushes. The feeding roof provides shelter from rain and keeps the food dry and mould-free. You'll be delighted when the feeding roof becomes the focal point for your garden birds.

Set with 2 pieces, Ø 14,5 cm, H 20 cm (with chain), 0,3 kg, instructions

FDA (2 pieces)

Bird bath

The design meets the needs of Central European garden birds: For smaller bird species – and insects too – the inner rim provides a solid place to stand. Larger birds can perch comfortably on the rubbery outer rim. It is possible to attach a strong branch in the centre to protect the birds against cats and as landing aid. Garden birds still need water to drink, even during colder times of the year. Our bird drinker should be used all year round.

Ø 32 cm, H 8 cm, 5 kg, instructions

VT

Earwig house

The earwig is a useful and harmless insect. They love to eat harmful greenfly that can cause large amounts of damage to fruit and flowers. Earwigs are useful to people as an organic form of pest control. Earwigs are nocturnal and return to their earwig house to sleep during the day. The earwig house will be occupied between the end of April and the end of October. The earwig house should be placed in a shady location, as close to the ground as possible, over a pile of branches. The earwigs will soon get to work.

Set with 3 pieces, Ø 3 cm, H 12 cm, 0,3 kg, instructions

OWH (3 pieces)

Hedgehog Ritz

The hedgehog is in fact the sort of helper that every gardener would like to have: A night creature, it feeds on insects, larvae, snails and slugs. The hedgehog needs only a quiet, hidden corner, where no dogs or cats go. With the Hedgehog Ritz, you ensure an all-year round dry and safe hedgehog nest.

The Hedgehog Ritz will be occupied by the hedgehog all year round; especially, however, in the winter for hibernation and in late summer for giving birth to its young.

H 14 cm, L 32 cm, W 30 cm, 3,5 kg, instructions
IR

Hedgehog snail-shell

The DENK hedgehog snail-shell was developed in consultation with a German hedgehog protection society. It is larger than the Hedgehog Ritz, so it's best suited to big hedgehogs and large hedgehog families. Hedgehogs can safely hide, nest and spend the winter in the hedgehog snail-shell. The thick, temperature regulating ceramic protects hedgehog families in the hot summer and in the cold winter.

H 16 cm, Ø 35 cm, 4,5 kg, instructions
IS

Toad house

During the day, toads hide under damp stones, leaves and steps. Overnight they go on the hunt for food, eating insects. Toads stay in the same place for the entire year and they are not afraid of people. Because our gardens are kept too tidy, toads search in vain for somewhere safe to hide for the whole year. The toad house should be placed on the edges of the garden, under hedges. The back is buried in the ground and covered with earth, leaves and branches.

L 31 cm, W 15 cm, H 8 cm, 3 kg, instructions
KH

Bumble-Bee castle

Bumble-bees are among the most important pollinating insects. Their temperature-immunity makes it possible for them to remain searching for food much longer than bees. With the DENK Bumble-Bee castle, these useful creatures can be given a nest which is almost natural and they can be given a specific home in the garden. We have painted the entrance to the Bumble-Bee castle blue, because bumble-bees are attracted by this colour. In spring, the queen uses the Bumble-Bee castle as nest, in autumn it is used as winter quarter. Nesting wool is included.

two-part, H 16 cm, Ø 27 cm, 5,5 kg,
nesting wool, instructions
HB

Hornet nest

Hornets are extremely useful to people as insect exterminators. In high summer a hornet colony will eat 500 grams of insects a day. Every gardener knows the rule: where there's hornets there's no wasps. Hornets also present very little danger. Hornets are usually less confrontational than normal small wasps. Hornets are highly endangered and are under special protection. The DENK hornet nesting box gives these useful animals a nesting place that's as close to nature as possible. That helps this threatened species and aids natural pest control in the garden.

Developed, tested and recommended by experts

Luxor

The ingenious garden light with built in socket

The Luxor is a high quality mobile garden light with 5m connection cable and a sturdy and shade-free opal glass dome. If you turn the Luxor over you will find a quality socket inside with maximum 3,500 watt output. If you need a single source of power, you can use a socket in the house and then you can connect Luxor to Luxor, as an easy and cheap way to light up paths, steps, lawns and plants, to suit you. You can connect up to 55 one after the other.

Really practical: Thanks to the built in socket, you have a source of power anywhere in the garden, e.g. for electric mowers, hedge shears and Christmas lights.

The Luxor technically consists of two parts – the sturdy and particularly robust ceramic lights and the large, screw-on opal glass dome. It is installed underneath with a 60 watt bulb. Energy-saving bulbs can always be used.

Light house

The classic garden light

The Lighthouse is a sturdy, high tower house with a secure, square pointed roof. In the top part, four ceramic archways allow plenty of light to escape from all four sides. A ceramic cross lies securely on the base of the lighthouse. It holds the socket, bulb and also a hand-blown heavy crystal bell jar. The Lighthouse design is so authentic and original that it belongs in every cultivated garden and house design.

Mira

The Mira has a timeless, modern, precious and healing effect. The secret is in concentrating on a few design elements – the base is square and sturdy, with a square column on top, enclosed by a square platform that incorporates the installation and the settings.

Stella

Stella is a perfect light and design solution for original gardens. It's a light for garden lovers that like to let nature take its course. Its ceramic design is round and octagonal, a little star-shaped and repeats itself from side to side, from base to top.

Riva

The Riva light has been relief-carved to create attractive height and depth in the panels along its length. The light's relief is the specially selected design feature that makes the Riva light, space-saving and almost filigree. The Riva always radiates yet doesn't dominate.

Campanile

The combination of the round and octagonal shape elements gives the light its shape. The Campanile is an attractive garden sculpture by day and a light-radiating tower by night, providing all-round lighting. It acts like an individual object in its sphere of influence, incorporated or free standing but also in a group for garden paths, groups of trees, steps and walls.

Accessories

Double plug socket

Electronic appliances with a maximum output of 2,500 watts can be connected to the double plug socket. It gives you an additional source of power in the garden, e.g. for lawn mowers and Christmas lights. An electro-installer can also build in a motion sensor. A double plug socket is available for the lights specified.

Double plug socket · 9x16 cm · safety class I · IP 44 · 230 V · max. 2.500 W

DST

Rubber cable with plug

You can also place our lights where there is no underground cable, e.g. in winter gardens on patios or in the garden using a rubber cable. We can make drill holes in nearly all stand lights through which can be fed a 10 metre long rubber cable with a welded plug that can be connected to the mains using a normal plug socket. Cable and plug are suitable for outdoor use. An extensive drill hole in the bottom part of the light means that the stand light stays straight, despite the cable. It is possible to change to an underground cable later. The rubber cable with plug can be installed for the lights specified.

10 m rubber cable with welded plug

STK

Please note: You can either choose a double plug socket or a rubber cable with plug. Both in one light is not possible.

Steady shape

"Steady shape" is a group of seating furniture and tables. They are intransient, constant places to relax, take a breather, contemplate life and communicate. The "steady shape" should stimulate the senses for nature, enjoyment of life and art. "Steady shape" takes place in gardens, meadows, parks, terraces and winter gardens. The style is excitingly modern, mature and timelessly beautiful. Only two materials are used: *CeraNatur*[®] ceramic and hot-dip galvanised anti-rust square bar steel.

Benefits:

- Decorative garden furniture for the whole year round.
- Lasts for decades, no care required, 15-year guarantee.
- Doesn't need to be put away in winter.
- The ceramic stores the sun's energy.
- Ergonomic, very comfortable to sit on.
- The ceramic parts can be exchanged if necessary.

Water tower

Our water tower is pleasing to the eye. It represents enjoyment of gardening, garden culture and functionality. It can be used to decorate house walls, garden walls and open areas in the garden.

The water tower is a high-fired ceramic item, frost-proof, weather-proof and with a 15-year materials warranty.

The brass tap and the internal brass connecting sleeve (1/2 inch) come pre-installed. A hose connection is fed into the base from beneath and attached to the connecting sleeve. The roof can be removed for installation. The water tower is screwed onto a base and is extremely stable. It's all very simple.
