

BRAZIERS

Fire, light and heat

DENK

Braziers made of CeraFlam®

With a *Denk brazier*, it is possible to provide wonderful light, a homely mood and cozy warmth. In addition, you can grill and roast with any *Denk brazier*.

Denk braziers can be stoked anywhere outdoors – whether in summer or in winter. All our braziers are transportable.

Denk braziers are manufactured in Germany, by hand, with *CeraFlam®*, which is a patent-protected fire ceramic. There is probably no other ceramic material with such extraordinary properties. It is a natural fire ceramic, the material composition of which is derived from the results of space research.

CeraFlam® has a very high heat capacity – approx. 3 × greater than that of steel. This allows *Denk braziers* to preserve the energy generated by fire for a very long time while emitting radiating heat into the environment.

FEURIO

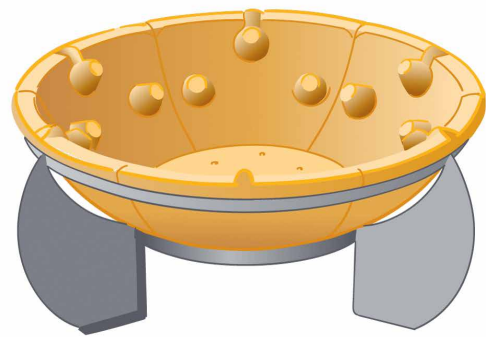

Our largest brazier

Feurio is the ultimate solution for those who like fires. Our largest brazier combines fire, heat and light, together with an extraordinary design.

The stable stainless steel frame includes seven solid *CeraFlam*® ceramic elements. They save heat generated by fire for hours.

The *Feurio* will prove to be the warming and cozy centrepiece at any garden party, right up to in the early hours of the morning if required.

When grilling or roasting, you just place the additionally available grill or the matching pan on top. The *Feurio* is especially stable and safe.

Ø 65 cm | H 32 cm | 33 kg

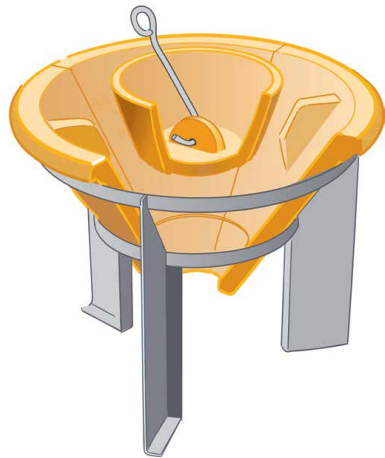

COMFY BRAZIER

Brazier and heating device

The four solid ceramic elements made of *CeraFlam*® are (individually) inserted in the stainless steel frame. They can absorb and preserve a particularly high level of heat – approx. 3 × more than steel. With this, the fuel requirement is also reduced, with the same heat exchanger capacity.

Even after the flame has gone out, the fire retainer will continue to emit heat for a very long time. With its raised funnel shape, the heat will be dissipated across a large radius. For easy cleaning, the ceramic inner shell (with the included poker) can be easily removed. The ash will then fall out downwards, and it can e.g. be caught in a bucket.

Ø 55 cm | H 46 cm | 27.5 kg

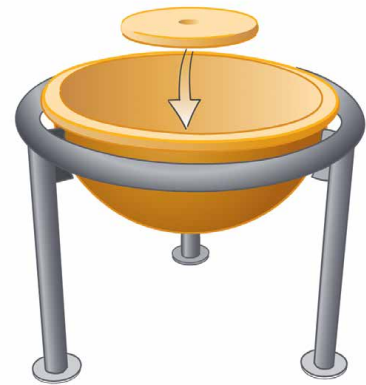

FEUERFREUND

Simple, powerful and ingenious

The *Feuerfreund* is a brazier and heater in one. It will let you enjoy fire, light and warmth in your garden, on your terrace or balcony – all in a safe and atmospheric way.

The *Feuerfreund* is robust and hard-wearing. The solid ceramic bowl is placed in the stainless steel stand. Better heat distribution is enabled by an additional inserted ceramic plate. Why not start a fire right now?

The *Feuerfreund* is mobile and easy to transport. If you so request, we can offer a grill to put on top of it for grilling and roasting.

Ø 49 cm | H 40 cm | 14 kg

BRAZIER

The classic

It's the size that counts: you don't need a garden for the *Brazier*. On your balcony or terrace, as well, there will be no problem using it – it's a delight for every fire fan and their friends.

Unlimited mobility: whether it's for a picnic, a moment on the beach or a moment at a quarry pond, the brazier is always a good thing to have close by. It is easy to transport, and is there for you when you feel like fire romance to warm up the night.

You can burn any kind of wood in the *Brazier*. The ideal firewood should be approx. 20cm long and split apart. To avoid smoke, the firewood should always be truly dry. If required, charcoal can also be used.

Ø 34cm | H 18cm | 6kg

MINI BRAZIER

The adventure fire

The *Mini Brazier* is a real brazier – just in a smaller format. The *Mini Brazier* is a particularly good option for helping children to become familiar with the element of fire. Our experiences in nurseries and groups of children have shown that with the help of the *Mini Brazier* children can learn how to interact with fire safely, while having much fun in so doing.

Watch the fire, grill little sausages, or fry stick bread – all this, and much more, is possible with the *Mini Brazier*. All children are curious when it comes to fire. Dealing with it, mastering it, experiencing it in a playful way – these are things that give children confidence and allow them to better estimate the risks associated with fire. It is a beautiful thing to observe the kind of devotion with which children watch fire, carefully add small branches and experience warmth.

This is something that will help even the wildest rascals to come to their senses, and become calmer and more composed. The mini brazier is no toy. Children should use the mini brazier only under the supervision of adults. We recommend a minimum age of 5 years.

FIRELIGHTER

Making fire with cooking oil or candle leftovers

With the *Denk Firelighter*, made of *CeraFlam*®, safe and clean inflaming and stacking of large logs is no longer a problem. The Firelighter is perfectly suited for all *Denk braziers*, excluding the *Comfy Brazier*, which does not have a level base.

With the *Firelighter*, you can use cooking oil and candle leftovers as fuels. These energy sources are economical and ecological; every household should be using them. You will note your enthusiasm upon seeing how safely and easily your fire will start.

CELTIC CROCKERY

Cooking and baking on a fire

Our *Celtic Crockery*, made of glazed *CeraFlam*® ceramic, is designed for cooking and baking on an open fire. It can be used with all our braziers – naturally, this includes gas and charcoal grills alike, as well as in the oven. With *CeraFlam*® there is no oxidation (liable to affect taste), except in the case of metal pots. With *Celtic Crockery*, you can enjoy the full and unadulterated taste of the ingredients.

Notes and tips

Fuel

Any wood of your choice can be burned in the brazier. However, coated wood, plastics, paper waste or other waste must never be burned. This could lead to the formation of toxic smoke, and the ceramic could also be overly burdened, leading to it becoming damaged. Ideally, firewood should be approx. 20 cm long and split up. To avoid smoke, firewood should always be kept well dry – store it in an appropriate place. If necessary, charcoal can also be used.

The best location

The fire bowl may be used only in an open area, on a non-combustible substratum. To prevent possible tipping over, the location must always be level and solid.

Use

The fire ceramic is not unbreakable. The ceramic can become damaged as a result of wood thrown in carelessly, or bumps and blows. Mechanical damage will be intensified by heat pressure, and this could result in breakages. *Denk braziers* are tested for their thermal durability. We accept no liability for improper use. You don't have to protect your brazier like the apple of your eye, but if you treat it with care you will be thanked for it with long-term fire pleasure.

Cleaning

After use of the product, the ash can be emptied. Wood ash is an excellent fertiliser. Please note that embers can last up to 24 hours in ashes. In winter, when there is frost, the fire bowl must be covered. Otherwise, absorbed water could lead to fractures in the coarse-pored ceramic as a result of icing. However, it can be used during the winter without limitations.

Please note the following:

- Never use liquid fire accelerants.
- If it penetrates the ceramic, it could catch fire and the ceramic could break.
- Never extinguish a burning or hot brazier with water. This could lead to breakages brought on by excess stress. Let the fire in the brazier die out by itself, or you can extinguish it with sand, if necessary.
- The brazier should not be used if it is wet.
- Never let children play around the brazier unsupervised.
