

FRUIT FLY LIVE TRAP

Natural insect protection in a decorative design

DENK

Decorative fruit fly trap

The fruit fly trap lures the pesky insects away from fruit and food. It is simply placed directly next to food and the little pests disappear as if by magic.

Simply place a piece of fruit in the bowl and drip a little vinegar over it. This scent magically attracts fruit flies. They crawl through the hole in the lid and can then no longer fly out. Open the lid outdoors and release the fruit flies. The piece of fruit should be replaced every 2-3 days.

The fruit fly trap also works with the familiar, classic liquids. It is then no longer possible to release the insects.

Use as a candlestick

Fruit flies are more common in late summer and early autumn. However, the beautiful porcelain bowl can also be used as an elegant candle holder during the rest of the year. Simply place a (maxi) tea light in the bowl and enjoy the cosy candlelight.

The bowl is made of natural porcelain and can be cleaned by hand or in the dishwasher.
