

DENK NESTING-BOX

The *Nesting-Box* is made of two CeraNatur® parts. The body is colored natural green and provides a beautiful contrast to the roof. Both colors are chosen so that breeding birds recognize the *Nesting-Box* as a natural nesting cavity and are happy to use it. It can be mounted on both buildings and trees. An aluminum nail for mounting is included. The roof is secured against lifting and therefore offers protection from nest predators. Even woodpeckers cannot damage it, as the ceramic is very hard and durable.

Please note:

The body of the *Nesting-Box* is manufactured with very thick walls using a casting technique. As a result, streaks and color variations may appear on the surface. These manufacturing-related marks are a sign of the material's lasting quality. The ceramic surface develops a patina more quickly as a result, and the nest box blends even better into its natural surroundings.
