

LUXOR

DENK

Luxor

The Luxor is a mobile garden light with a 5 m connection cable and a stable, glare-free opal glass dome. The base also has a high-quality socket for discreet power distribution. This allows you to easily connect Luxor to Luxor and flexibly illuminate your house and garden at any time. You always have a power source at hand – e.g. for your electric lawnmower, hedge trimmer or Christmas lights.

Installation

Please remove the lamp carefully from the box. The glass cover is packed separately. Screw in the desired light bulb and then screw on the glass cover. Please only tighten the glass until you feel resistance. The lamp is now ready for use and can be connected.

Utilization

The Luxor is a portable outdoor light with a built-in socket. Additional lights or other electrical appliances can be connected to the built-in socket. The maximum possible connected load per socket is 3500 watts. The supplied plug cable is 5 metres long and has a welded plug. The glass cover becomes hot during operation.

Safety

The Luxor is TÜV-tested and CE-certified. It complies with the European EN standard. Light bulbs with an E27 screw base up to 60 watts can be used.

Location

The Luxor can be used anywhere in the garden. It must be placed on a secure, flat surface. The light must not be placed in depressions; surrounding water must always be able to drain away. If the Luxor is to remain in one place for a long period of time, it is advisable to place a foundation underneath it. This can be a stone slab or similar. This ensures that the light always remains upright and that ants do not nest in the base. Nevertheless, you should check the base from time to time in summer and clean it if necessary.

Guarantee

Our ceramics are handmade in our workshops in Coburg. They are fired at a very high temperature, making them permanently resistant to heat, cold, acids, alkalis, salt water and UV radiation. We offer a 15-year material guarantee. The ceramics are also very thick-walled and exceptionally robust. The lamp can be left outdoors all year round.

Cleaning

Over the years, moss may form on the ceramic. Weathering does not affect the ceramic. The light can be easily cleaned at any time with a soft brush and household cleaner.

Changing the light source

Light bulbs with an E27 screw base and a maximum power of 60 watts can be used. To change the light bulb, unscrew the glass cover and insert the light bulb. Please ensure that the light is not connected to the power supply. Then screw the glass cover back on as described under 'Assembly'.
